

Paris BPU is proud to provide our customers access to a GenerLink meter collar device that makes connecting to a portable generator safe and easy.

When you connect a portable generator to GenerLink and start it up, GenerLink automatically disconnects your service from the electric utility grid preventing the possibility of back feed, which can damage equipment and harm electric personnel. Because GenerLink is designed and rated to connect directly to a standard electric service of 200 amps or less, all you have to do to operate a critical appliance is flip a breaker on in the breaker panel once the generator is connected.

What is GenerLink?

GenerLink is a five-inch device that is installed behind your electric meter by your local utility company. GenerLink eliminates the hassle of running multiple extension cords or hiring an electrician to install an expensive transfer switch and sub-panel to get your generator up and running. Sold through Paris BPU, our customers have the option to purchase either a 30 or 40 amp device.

How can I get GenerLink at my home or business?

Paris BPU customers can now purchase GenerLink through the utility. Customers interested in purchasing GenerLink should complete the order form at our Main Office or online at www.parisbpu.com/generlink. Return the completed application to our Main Office and a Paris BPU representative will call to schedule an installation appointment. Installation typically takes less than an hour.

What is the price for a GenerLink system?

The GenerLink system is available in both 30 amp and 40 amp versions depending on the size of your generator and usage.

\$915 30 amp with surge protection

\$1,045 40 amp with surge protection

Each GenerLink system comes with a standard 20' long cord. Customers have the option of purchasing longer cord lengths for the added price of \$137.19 for 40'; \$235.97 for 60'; \$367.67 for 80'; and \$422.54 for 100'.

Additional cords available for purchase, please ask for more information

A \$250 non-refundable deposit is due at the time of application. Customers can pay the remaining balance at the time of installation or over 5 months on their monthly utility bill.

Why is having a GenerLink system important?

A GenerLink system eliminates the use of extension cords and other connections that can be hazardous to customers, neighbors, emergency personnel and utility workers. GenerLink also detects when a generator is operating and automatically disconnects from the utility grid, eliminating back-feed, which is extremely dangerous for utility personnel.

For more information or if you would like to purchase your new GenerLink system, call Paris BPU today at 731-642-1322 or visit www.parisbpu.com/generlink.
